

ABSTRACT

Every race and culture in human history has experienced music in one form or another. From the simple clapping of hands and the singing of a melody to the act of playing instruments, music is linked to our history our present and our future.

Depending on how one defines music, you could say that everything in the universe has music within it. Music can be defined as the organization of vibrations in time. So it is no longer just the obvious birds and whales and other animals that can make music, but also down to the microscopic scale, the vibrations of a cell or an atom can be considered music of a sort. Some even believe that the universe itself is simply one huge symphony, sending vibrations across time and space.
